

IEM PRESIDENT'S MESSAGE

Firstly, on behalf of The Institution of Engineers, Malaysia (IEM) I would love to congratulate our Standing Committee on Information and Publications for their great labours and meaningful contribution in publishing this Directory of 2008/09. I wish such needful commitment to be extended and continued in all coming years as to achieve our mission and vision especially thru our publication approaches and conducts.

I strongly believe that IEM continuously to become bigger platform for the engineering society. The networks among all of us are always needed similar to the nature of engineering, technology or science will not stand alone to create a world. Look forward to build and widen and larger system of your contact networking for the better of your future and the development of our nation. The contact networking of the local engineers in Malaysia should be seen as a huge dynamism in science, technology and engineering enhancement.

Personally, I would also like to highlight to all professional engineers in Malaysia; especially those who are the members of IEM, to keep upholding your prized human values towards our mother nature such as in sustaining our environment. Our engineering image should be remained on the same path towards the efforts to integrate the nature and modernisation. Let us be the largest professional group who are not only bring to light as for their abilities but also as the reason of their noble interest of living.

And all our collective agenda can only be established and stand solidly in the eyes of our nation thru a gathered teamwork and comprehension towards the same destination in future. On behalf of IEM, I would love to call all parties in Malaysia either the government or privatised sectors to give their supports to our engineers throughout the years heading to our vision 2020.

And never to be forgotten are the advertisers who look into our directory publication and distribution as their good marketing channel every year. Thank you for your support and mutual interest with IEM publication opportunities.

Let's create our national engineering networking!

Thank you.

Dato' Paduka Engr. Hj. Keizrul bin Abdullah, F.I.E.M., P.Eng.
President,
The Institution of Engineers, Malaysia
